Assignment title**Assignment 1: Requirement Analysis and Application Design**

In this assignment, you will have opportunities to provide evidence against the following criteria.
Indicate the page numbers where the evidence can be found.

Assessment criteria	Expected evidence	Task	Assessor's Feedback
LO1. Produce a Software Design Document by analysing a business-related problem and deduce an appropriate solution including a set of initial requirements			
P1 Explore a business-related problem and produce a well-defined Problem Definition Statement supported by a set of user and system requirements.	1. Use case diagram to capture problem requirements 2. Screen-flow diagram and wireframes (prototype screen)	1	

<p>P2 Determine any areas of risk related to the successful completion of your application.</p>	<p>3. Questions to identify any problem from the requirements, use cases, screen-flow diagram or UI 4. Answer to above questions according to personal research</p>	<p>2</p>	
<p>LO2. Use design and development methodologies with tools and techniques associated with the creation of a business application</p>			
<p>P3 Research the use of software development tools and techniques and identify any that have been selected for the development of this application.</p>	<p>5. ERD describing application database 6. UML Class diagram for the core business processing</p>	<p>3</p>	

Assessment criteria	Expected Evidence	Feedback (note on Merit/Distinction if applicable)
Merit descriptor No. (M1)

LO1 Produce a Software Design Document by analysing a business-related problem and deduce an appropriate solution including a set of initial requirements		
P1 Explore a business-related problem and produce a well-defined Problem Definition Statement supported by a set of user and system requirements. P2 Determine any areas of risk related to the successful completion of your application.	M1 Analyse a business-related problem using appropriate methods and produce a well-structured Software Design Document that defines a proposed solution and includes relevant details on requirements, system analysis, system design, coding, testing and	LO1 & 2 D1 Justify the tools and techniques chosen to realise a custom built website. Justify your preferred selection of tools and techniques in deducing an appropriate solution to a business related problem.

	implementation.	
LO2 Use design and development methodologies with tools and techniques associated with the creation of a business application		
P3 Research the use of software development tools and techniques and identify any that have been selected for the development of this application.	M2 Compare the differences between the various software development tools and techniques researched and justify your preferred selection as well as your preferred software development methodology.	

Assignment Brief and Guidance

As the technology is being developed rapidly nowadays, FPT Co. desires to build the continuing study environment throughout the corporation. It is necessary to develop a web-based system, which manages the activity of "Training" for internal training program of the company. This system can be used to manage trainee accounts, manage trainers, manage course categories, manage courses, manage topics, assign topic to course, assign trainer to topic, assign trainee to course.

This is a system used by HR department. We have three roles in this system, an administrator, training staff and a trainer. The brief description of those roles is as follow.

1. An administrator's role

- Can login to the system through the first page of the application
- Can create/edit/delete new user account for trainer/training staff and assign/change(if existing user) username and a password

2. A training staff's role

- A registered training staff, who is assigned a user name and a password by the administrator logs in can create trainee accounts by entering details like trainee name, trainee accounts, age, date of birth, education, main programming language, TOEIC score, experience details, department, location, etc.
- After entering successfully all details for trainees, his/her details are then stored in the database. The training staff is given a list of trainees for him to view and search. From the list of trainees, he can also search by trainee account, programming language, TOEIC score...
- Can update, delete trainee accounts
- Can manage course categories such as searching, adding, updating and deleting course categories. Course category includes the information such as course category name and descriptions.
- Can manage courses such as searching, adding, updating and deleting courses. Course includes course name and description.
- Can add topics such as topic name and topic descriptions into a course, add courses into a category.
- Can manage trainer profile such as adding, updating and deleting the information: Trainer name, External or Internal Type, working place, telephone, and email address.
- Can assign trainer to a topic.
- Can assign trainee to a course.

3. A trainer's role

- In the same system, the trainer who have been registered by the administrator can login and can update his profile such as Trainer name, External or Internal Type, education, working place, telephone, and email address.
- Can view courses which have a topic he is assigned to.

Your manager suggests that this would be a great opportunity for you to demonstrate your capabilities by designing and developing the application. After considering, you decide to do the project. The project consists of 4 steps which is divided into two phases. In this first phase, you have to carry on requirement analysis and produce solution design for the problem.

Assignment Guidance

Task	Assessment Criteria	Requirement
1	P1 Explore a business-related problem and produce a well-defined Problem Definition Statement supported by a set of user and system requirements.	<ol style="list-style-type: none"> 1. Use case diagram to capture problem requirements 2. Screen-flow diagram and wireframes (prototype screen)
2	P2 Determine any areas of risk related to the successful completion of your application.	<ol style="list-style-type: none"> 3. Questions to identity any problem from the requirements, use cases, screen-flow diagram or UI 4. Answer to above questions according to personal research
3	P3 Research the use of software development tools and techniques and identify any that have been selected for the development of this application.	<ol style="list-style-type: none"> 5. ERD describing application database 6. UML Class diagram for the core business processing
4	M1 Analyse a business-related problem using appropriate methods and produce a well-structured Software Design Document that defines a proposed solution and includes relevant details on requirements, system analysis, system design, coding, testing and implementation.	<ol style="list-style-type: none"> 7. Detail use case description for important functions
5	M2 Compare the differences between the various software development tools and techniques researched and justify your preferred selection as well as your preferred software development	<ol style="list-style-type: none"> 8. A presentation to introduce different software development methods (at least 3), for example: Waterfall, Prototyping, Spiral, Agile...

	methodology.	
6	D1 Justify the tools and techniques chosen to realise a custom built website. Justify your preferred selection of tools and techniques in deducing an appropriate solution to a business related problem.	9. Critical comparison among development methods in the presentation and reasons for your selection of tools and techniques.

Submission Format

The submission is in the form of 1 word document containing required evidences and 1 presentation if necessary (M2, D1).

You are required to make use of headings, paragraphs, subsections and illustrations as appropriate, and all work must be supported with research and referenced using the Harvard referencing system.

-----------------	----

1. System requirements

According to the requirements, we have to develop an web application which includes four roles to participate in it: Admin, Training Staff, Trainer, and Trainee. Four of them have an account to login and participate in the system.

● Admin

Attributes: Not include

Behaviors:

- Have the right to manage account such as Add, Delete, Search the account.
- Can update the account username and password.

● Training staff

Attributes: Not include

Behaviors:

- Have the right to manage Course Category, Course, and Topic such as Add, Delete, Search, and Update.
- Also can manage the trainee account and profile, and assign the trainer to topic and course, and trainee to course.

● Trainer

Attributes: Name, External or Internal Type, education, working place, telephone, and email address.

Behaviors:

- Can see the topics and courses he or she is assigned to.
- Can modify their profile information.

● Trainee

Attributes: Name, Date of birth, education, main programming language, TOEIC score, experience details, department, location.

Behaviors: Not included

2. System Architecture

2.1. Design model

The design model applied to design the application is MVC (Model - View - Controller). MVC is the shorten word of three components of the model: Model, View, Controller. This is a design model mostly used in software engineering. MVC model divided the source code into 3 parts, corresponding to each word. Each word corresponds to a separate activity in a model.

To better understand, we will go along to discuss each component.

- Component of MVC:

- **Model**

Model is a component to store all data of the application. This unit is a bridge between the two components below are View and Controller. The model takes the form of a database or sometimes just a normal XML file. Model clearly shows the manipulations with the database such as allowing viewing, accessing, processing data, and so on.

- **View**

This component contain code of the application interface. Where users can obtain MVC data information through query operations such as searching or using through websites.

Typically, web applications use View as part of the system where HTML elements are created. Besides, View also has a function to record the user's activity to interact with the Controller. However, the View does not have a direct relationship with the Controller, nor is it able to retrieve data from the Controller, but only displays the request for the Controller to pass.

For instance, the "delete" button created by the View when the user clicks the button will have an action in the Controller.

■ Controller

The component is responsible for handling user requests coming through the View. When the requests come, the Controller will manipulate the request and then interact with the Model to get the data users want. From there, Controller can give data that is right for the user.

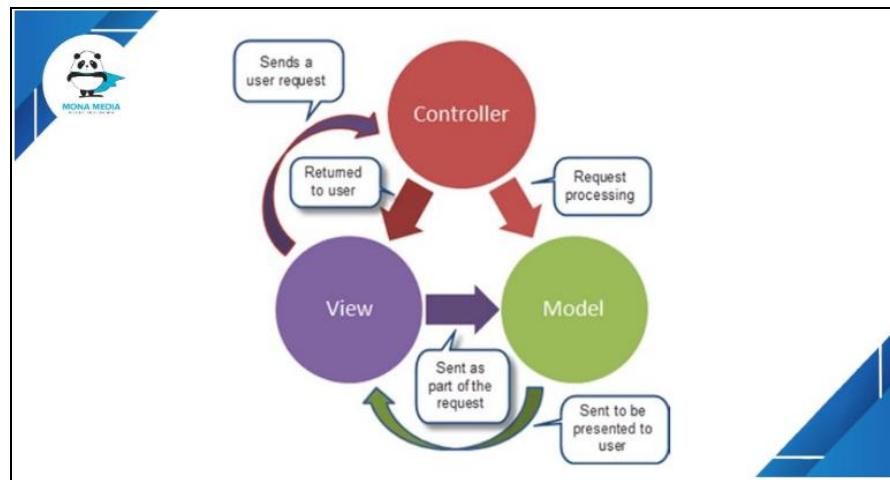

Figure 1 : Components of MVC model

In general, the MVC model is not complicated. As you can imagine, when a request is sent from the client to the server, the Controller will perform its task of receiving and processing the request. In case of need, it is possible to contact the Model, who works with the database, to assist. When the request is processed, the result will be returned to the View. At View will create HTML code into the interface and render displayed on the browser. MVC is a model that is used a lot in web application programming. A well-developed MVC system will allow

front-end, back-end development on the system without interference, sharing, editing files while one or both parties are still working. Therefore, I use the model to design the application.

2.2. UML diagrams

2.2.1. Use case diagram

- Administrators

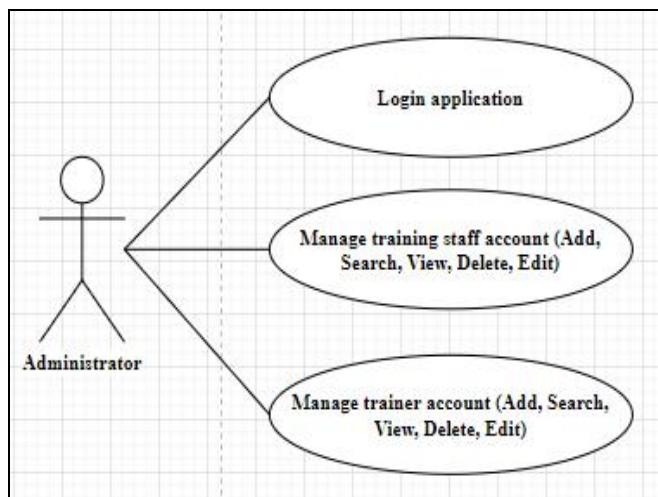

Figure 2 : Use case diagram of administrators

Name	Manage trainer/staff account
Description	Admin can add, search, view, edit and delete the trainer/staff accounts.

Actor	Administrator
Goal	<ul style="list-style-type: none"> - Add new trainer/staff accounts. - Search trainer/staff account and view the information. - Update username and password of existing trainer/staff account. - Delete existing trainer account/staff.
Trigger	Admin need to add, search, update, delete trainer/staff accounts.
Normal flow	<p>Admin has to log in into the application:</p> <ul style="list-style-type: none"> - Add account: <ol style="list-style-type: none"> 1. Admin visited add new account page. 2. Admin insert username and password for new account 3. Admin confirm to save the account - Search account: <ol style="list-style-type: none"> 1. Admin visited the home page. 2. Admin insert the keyword into the search bar. 3. Admin confirm to search the account via keyword. -Update account: <ol style="list-style-type: none"> 1. Admin search for the account need to be updated. 2. Admin enter update page with the button.

	<p>3. Admin modify the account information in fields.</p> <p>4. Admin confirm to update the account information</p> <p>-Delete account:</p> <p>1. Admin search for the account need to be deleted.</p> <p>2. Admin command to delete the account with the button.</p> <p>3. Admin confirm to delete the account.</p>
--	--

- **Training Staff**

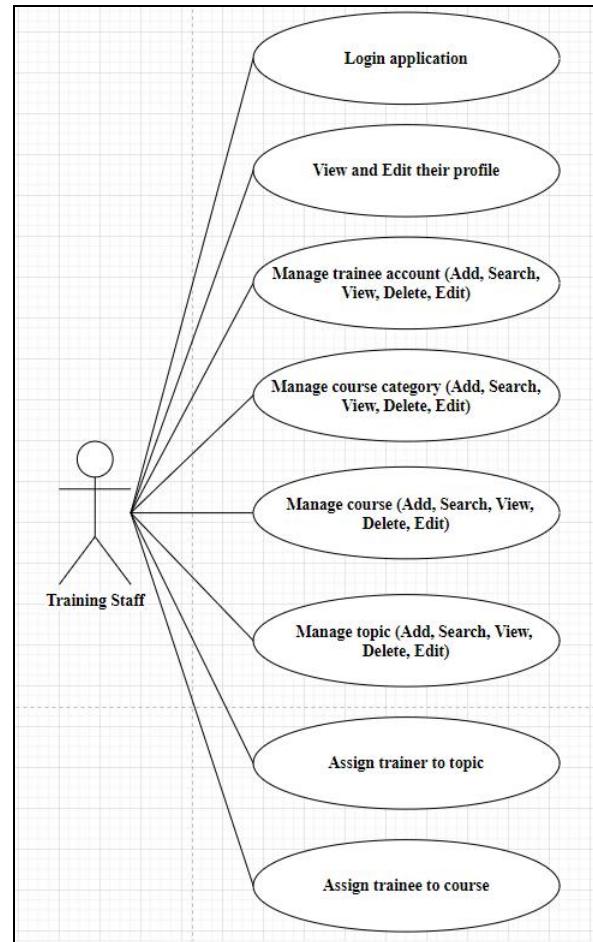

Figure 3 : Use case diagram of training staffs

Name	View and edit profile
Description	Staff can view and edit their own profile.
Actor	Training Staff
Goal	<ul style="list-style-type: none"> - Visit the profile page and see the information. - Update the profile information
Trigger	Staff need to change their profile information.
Normal flow	<p>Staff has to log in into the application:</p> <ol style="list-style-type: none"> 1. Visited the profile page. 2. Change the information in the field. 3. Confirm to update the profile information.

Name	Manage trainee account /category /course /topic.
Description	Staff can add, search, view, edit and delete thetrainee account /category /course /topic.
Actor	Training Staff

Goal	<ul style="list-style-type: none"> - Add new trainee account /category /course /topic. - Search trainee account /category /course /topic and view the information. - Update existing trainee account /category /course /topic information. - Delete existing trainee account /category /course /topic.
Trigger	Staff need to add, search, update, delete trainee account /category /course /topic.
Normal flow	<p>Staff has to log in into the application:</p> <ul style="list-style-type: none"> - Add new: <ol style="list-style-type: none"> 1. Staff visited add new page. 4. Staff insert information for new entity. 5. Staff confirm to save the new entity - Search: <ol style="list-style-type: none"> 4. Staff visited the page show list of records. 5. Staff insert the keyword into the search bar. 6. Staff confirm to search the records via keyword. -Update account: <ol style="list-style-type: none"> 5. Staff search for the record need to be updated. 6. Staff enter update page with the button. 7. Staff modify the information in fields.

	<p>8. Staff confirm to update the information</p> <p>-Delete account:</p> <p>4. Staff search for the record need to be deleted.</p> <p>5. Staff command to delete the record with the button.</p> <p>6. Staff confirm to delete the record.</p>
--	---

Name	Assign trainer to topic
Description	Staff can assign the trainers to the topics which trainer will teach to trainees.
Actor	Training Staff
Goal	Assign the existing trainers into an existing topic.
Trigger	Staff need to assign trainers into the topics.

Normal flow	<p>Staff has to log in into the application:</p> <ol style="list-style-type: none"> 1. Search for an existing topic. 2. Enter edit page of the topic. 3. Insert trainer id into field 4. Assign the trainer having the id into the topic with the button
--------------------	--

Name	Assign trainee to course
Description	Staff can assign the trainees to the courses which trainee need to participate.
Actor	Training Staff
Goal	Assign the existing trainees into an existing course.
Trigger	Staff need to assign trainees into the courses.
Normal flow	<p>Staff has to log in into the application:</p> <ol style="list-style-type: none"> 1. Search for an existing course. 2. Enter edit page of the course. 3. Insert trainee id into field. <p>Assign the trainee having the id into the course with the button.</p>

- Trainer

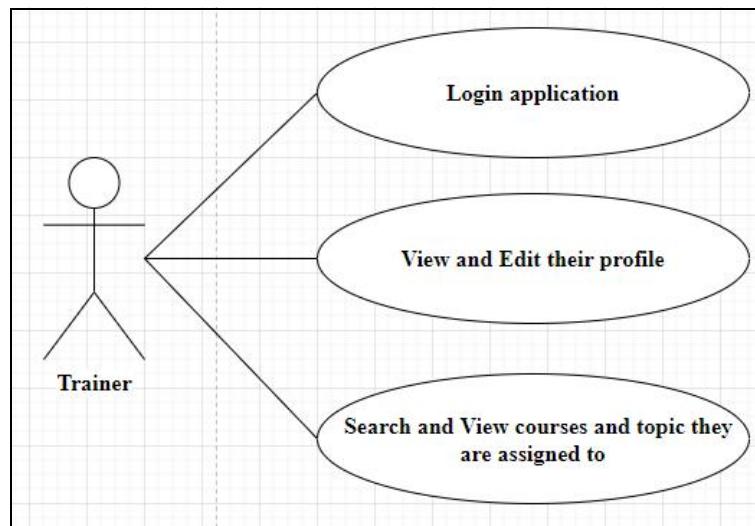

Figure 4 : Use case diagram of trainers

Name	View and edit profile
Description	Trainer can view and edit their own profile.
Actor	Trainer
Goal	<ul style="list-style-type: none"> - Visit the profile page and see the information. - Update the profile information

Trigger	Trainer need to change their profile information.
Normal flow	<p>Trainer has to log in into the application:</p> <ol style="list-style-type: none"> 1. Visit the profile page. 2. Change the information in the field. 3. Confirm to update the profile information.

Name	Search and view the assigned topics and courses.
Description	Trainer can view the topics and courses they are assigned to.
Actor	Trainer
Goal	Visit the page show list of teaching topics and courses.
Trigger	Trainer need to see the list of topics and courses they are assigned to.
Normal flow	<ol style="list-style-type: none"> 1. Trainer log in into the application. 2. Visit the home page.

- Trainee

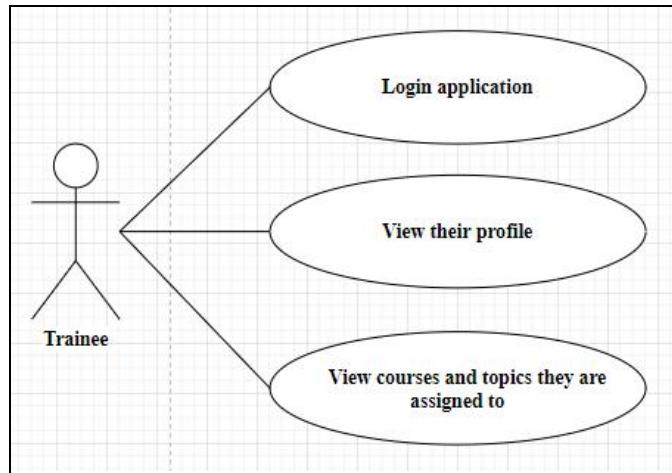

Figure 5 : Use case diagram of trainees

Name	View profile
Description	Trainee can view and edit their own profile.
Actor	Trainee
Goal	- Visit the profile page and see the information.
Trigger	Trainee want to see their profile information.
Normal flow	Trainee has to log in into the application:

	<ol style="list-style-type: none">1. Visit the profile page.2. See the information of their own profile.
--	---

Name	Search and view the assigned courses.
Description	Trainee can view the courses they are assigned to.
Actor	Trainee
Goal	Visit the page show list of studying courses.
Trigger	Trainer need to see the list of courses they are assigned to.
Normal flow	<ol style="list-style-type: none">1. Trainee log in into the application.2. Visit the home page.

2.2.2. Class Diagram

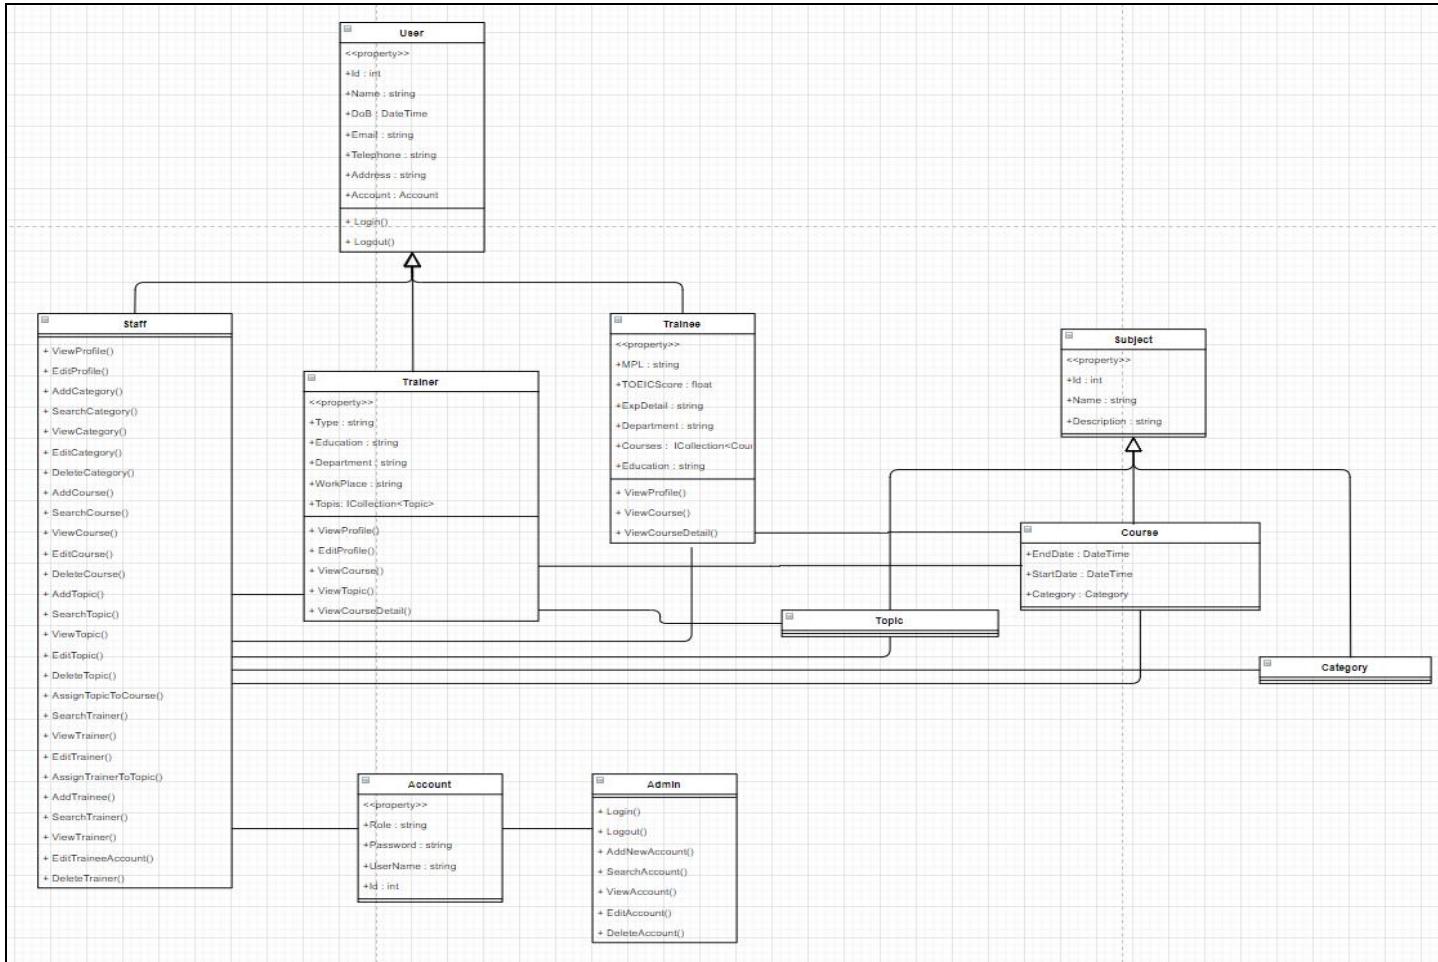

Figure 6 : Class diagram of the application

To provide the specific detail of the class diagram, I use the table below illustrates the relationship between classes.

Order	Classes	Actions	Classes	Relationships
1	Admin	Manage	Account	Association
2	Staff	Inherit	User	Generalization
3	Trainer	Inherit	User	Generalization
4	Trainee	Inherit	User	Generalization
5	Staff	Has	Account	Association
6	Staff	Manage	Trainee	Association
7	Staff	Assign	Trainer	Association
8	Staff	Manage	Category	Association
9	Staff	Manage	Courses	Association
10	Staff	Manage	Topic	Association
11	Trainer	Has	Account	Association
12	Trainer	Has	Topic	Association
13	Trainer	Teach	Course	Association
14	Trainee	Has	Account	Association
15	Trainee	Learn	Course	Association
16	Category	Inherit	Subject	Generalization

17	Course	Inherit	Subject	Generalization
18	Topic	Inherit	Subject	Generalization
19	Course	Belong to	Category	Composition
20	Topic	Belong to	Course	Composition

2.2.3. ERD diagram

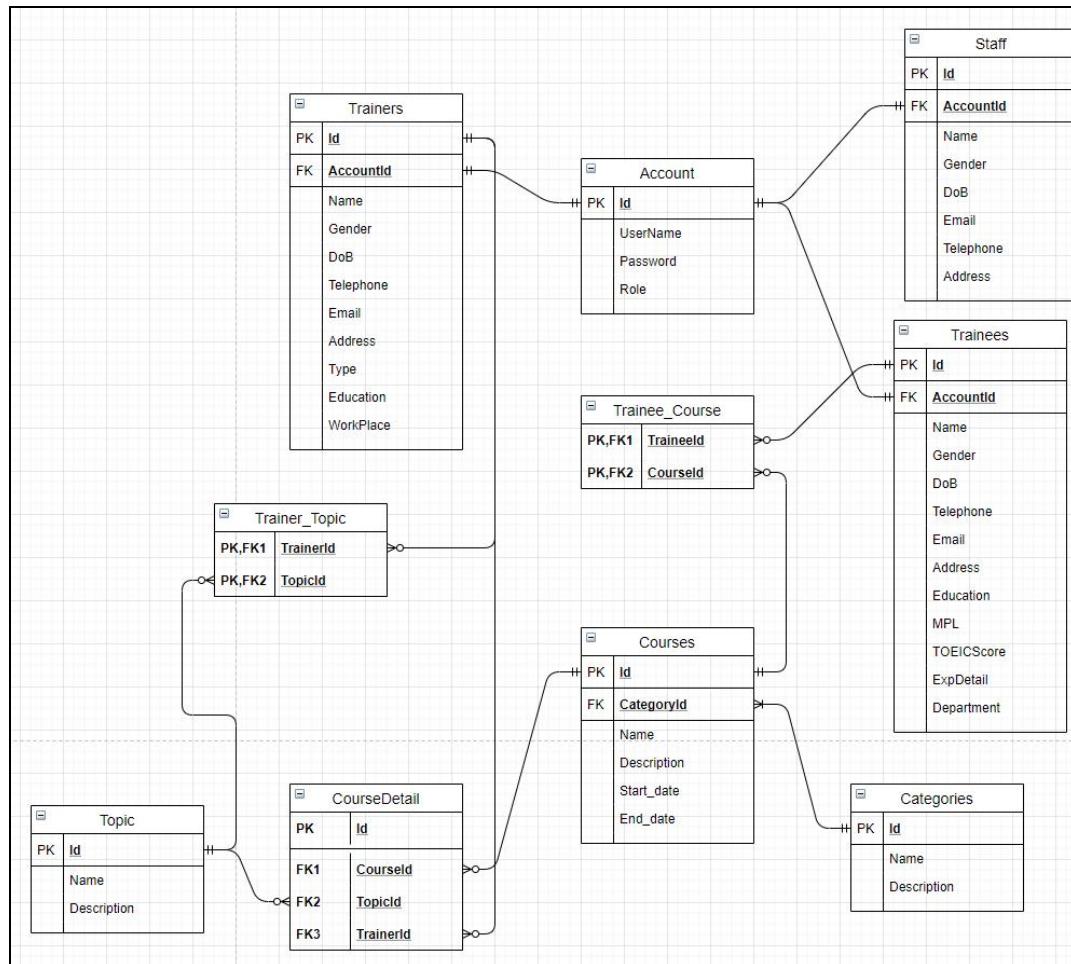

Figure 7 : The ERD design for the application

The following table describe the relationships between entity.

Entities	Relationships	Entities
Account	One to One	Staff
Account	One to One	Trainer
Account	One to One	Trainee
Course	One to Many	CourseDetail
Topic	One to Many	CourseDetail
Trainer	One to Many	CourseDetail
Trainer	Many to Many	Topic
Category	One to Many	Course
Trainee	Many to Many	Course

2.2.4. Screen flow diagram

- Administrator

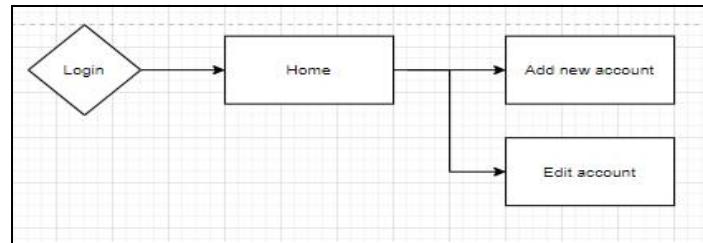

Figure 8 : Screen flow diagram when login as admin

- Training Staff

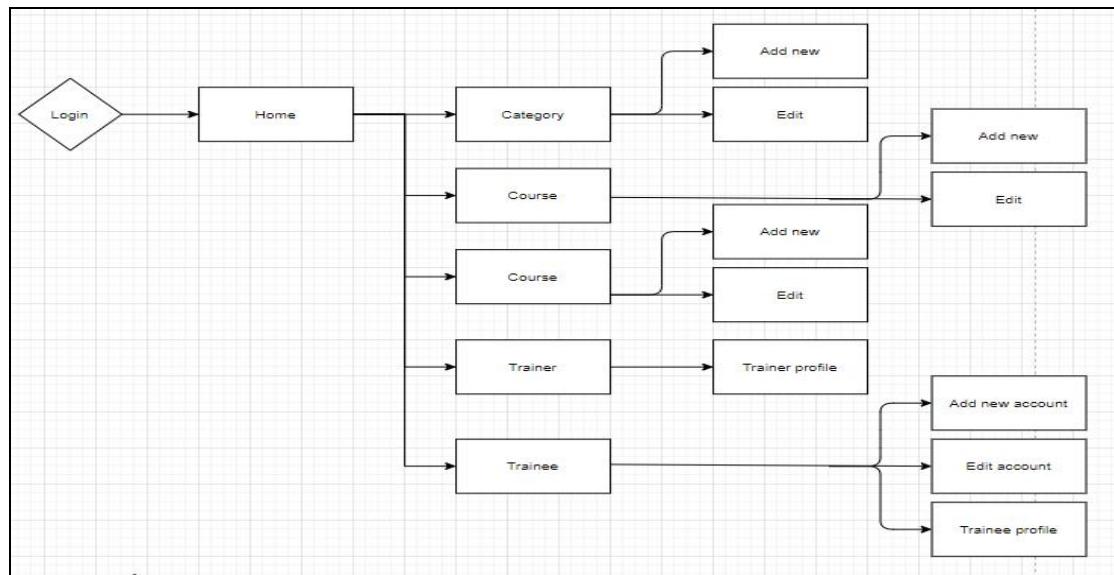

Figure 9 : Screen flow diagram when login as training staff

- **Trainer and Trainee**

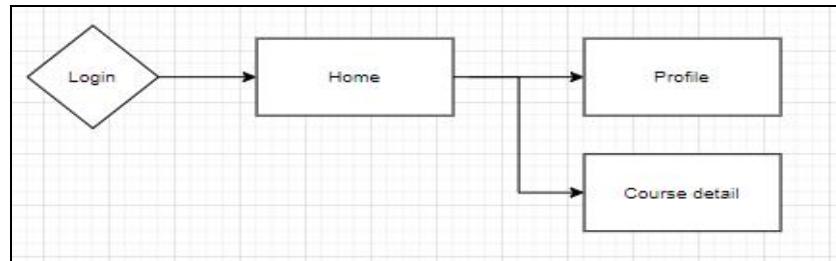

Figure 10 : Screen flow diagram when login as trainer and trainee

3. Wire frame of system

Wireframe is an important tool in product design and development. When creating a product, a wire frame is a design that helps developers, product managers, and designers can talk to each other. And whenever there is a change in the interface, everyone is easy and quick to understand and implement. Wireframe can be done quickly on paper or in computer form.

3.1. Login page

When user visit the url of application, the system will require user to enter valid username and password. If the username or password does not exist, user will can not login the system, and the page will inform user to re-enter username and password.

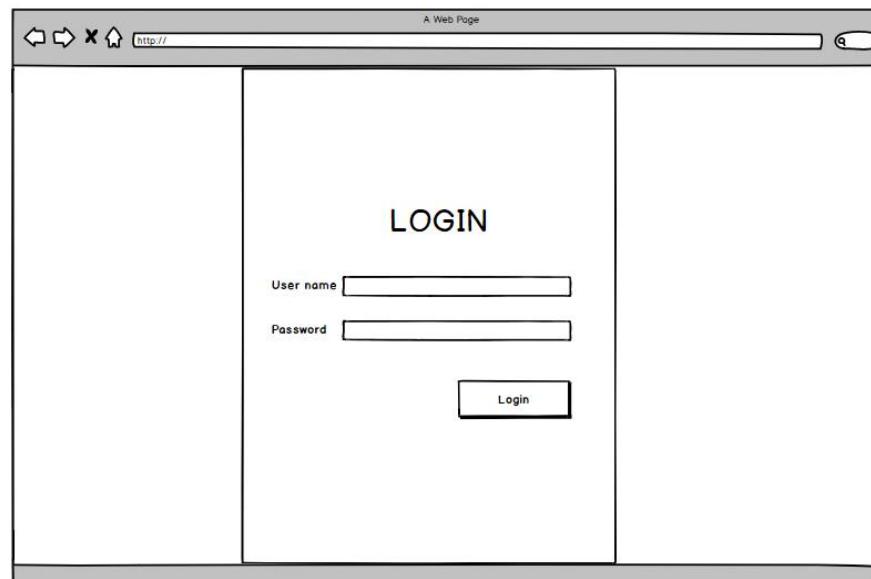

Figure 11 : Wire frame of login page

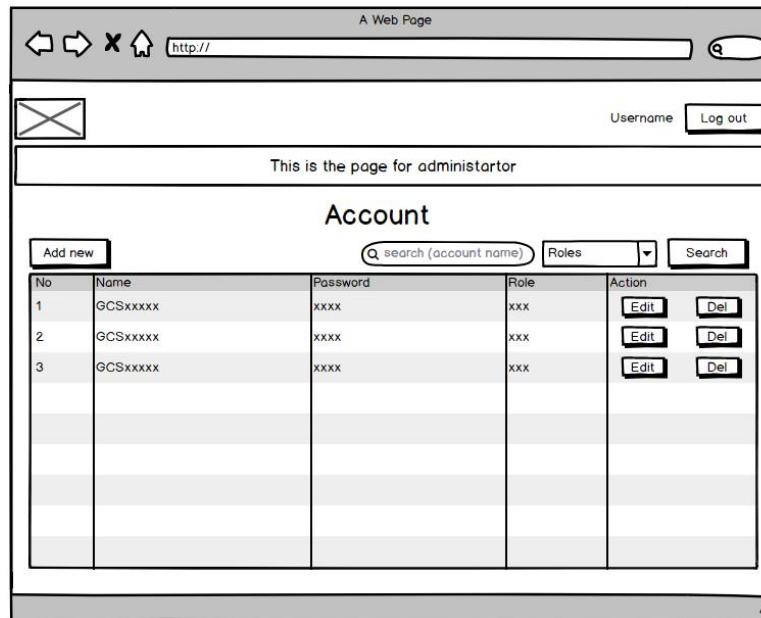

No	Item	Description	Constraints
1	Username text box	Input field for username	Min 3 characters and Max 20 characters.
2	Password text box	Input field for password	Min 3 characters and Max 20 characters.
3	Login button	The button will submit the username and password to server	

3.2. Login as Administrator

As the system has four different roles, users with different role will see different interfaces of the application. The below interfaces are designed for administrators.

- **Home page**

In the home page, administrators will see list of account exist in the system. In here, they can also search the specific accounts via the search box.

The wireframe shows a web browser window titled 'A Web Page' with the URL 'http://'. The header includes standard navigation icons (back, forward, stop, refresh) and a search bar. On the right side of the header is a 'Username' field and a 'Log out' button. Below the header is a message box containing the text 'This is the page for administrator'. The main content area is titled 'Account'. It features a table with columns: No, Name, Password, Role, and Action. The table contains three rows of data:

No	Name	Password	Role	Action
1	GCSxxxxx	xxxx	xxx	<input type="button" value="Edit"/> <input type="button" value="Del"/>
2	GCSxxxxx	xxxx	xxx	<input type="button" value="Edit"/> <input type="button" value="Del"/>
3	GCSxxxxx	xxxx	xxx	<input type="button" value="Edit"/> <input type="button" value="Del"/>

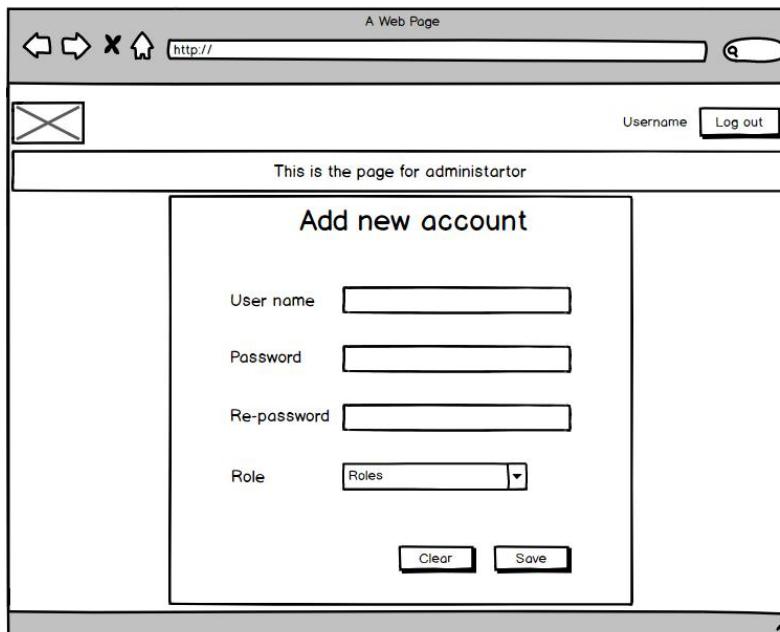

Below the table is a search bar with the placeholder 'search (account name)', a dropdown menu labeled 'Roles', and a 'Search' button.

Figure 12 : Wire frame of home page for admin

No	Item	Description	Constraints
1	Logo picture	The logo of the application and it is assigned the home page link.	
2	Username label	Show the username of the login account	
3	Log out button	User will log out the application if click on it.	
4	Add new button	User will go to add new page if click on it	
5	Search box	User can search account via user name	Min 1 characters and Max 20 characters.
6	Search combo box	User can search account via role	Only includes All, Admin, Staff, Trainer, Trainee.
7	Search button	User can search account if click on it	
8	Account table	User can see list of account	
9	Edit button	User will go to edit page if click on it	
10	Del button	User will delete account if click on it	

- **Add new account**

The below page let the admin create the new account. To visit the page, admin have to click the “Add new” button in the home page.

4. Table of questions to identify the risk

No	Questions	Answers
1	In the requirement do not includes the role of trainees. Should we allow trainees to login the application?	Although these are no specific detail of role for trainee, the application should allow them to participate. Because it is quite inconvenience for trainees if they can not check the courses schedule. My suggestion is to provide the interface to let trainee see their courses schedule.

2	<p>In the use case diagram of trainee, we only let them to see the theirs profile information but do lot let them modify it. For better convenience, we should allow the permission for trainers , shouldn't we?</p>	<p>The requirements of the application does not require to specific functions to trainees. Providing so many permission to trainees is not necessary. Furthermore, in my opinion, trainees should not be allowed to modified their profile in most case. Therefore, it is quite risky to programme this function to the application.</p>
3	<p>In the ERD, I see that it does not include the table for admin. According to the requirement, admin take an important role in the system. It is inappropriate for not having the data for the admin, isn't it?</p>	<p>The problem was considered before designing the ERD. The answer is unnecessary for including the data of administrators. Because the data seem kind of redundant, the table is eliminated from the ERD. However, these are still some percentages to cause errors for the application. Therefore, we have prepared several plans to fix the possible risks when it happens.</p>
4	<p>The designed wire frame of the application seems quite simple. This may cause the customer to unsatisfied with the interface. Should we use the more attractive design?</p>	<p>The application is designed for education purpose. Therefore, attractive design was not considered. However, to ensure the satisfaction of customer, the design will be presented to them before programming. If they are not satisfied by the interfaces, the attractive design will be considered.</p>
